PROJECTS

HMS

- Successfully transitioned the HMS project from a Node.js codebase to NestJS, enhancing the structure, modularity, and maintainability of the backend services.
- Designed and implemented relational database schemas in MySQL to support HMS functionalities such as patient records, appointments, and billing.
- Built interactive and user-friendly UI components using ReactJS, adhering to best practices and design guidelines.
- Implemented security best practices, including input validation, authentication, and authorization mechanisms to protect sensitive data.

Swagger(Swagger Integration and Deployment)

- Cloned and deployed Swagger source code on the company server, enabling comprehensive API documentation and testing capabilities for development teams.
- Configured server environments and ensured seamless integration with existing systems.
- Created a secure and user-friendly login page for company team meets, utilizing Swagger code to streamline access and improve security.

Todo App Development:

- Developed a full-stack Todo application using ReactJS for the frontend, NestJS for the backend, and MySQL for the database.
- Implemented features such as task creation, editing, deletion, and real-time updates to enhance user productivity.
- Ensured seamless integration between frontend and backend, providing a smooth and efficient user experience.
